Abstract. Using data obtained from the University Project Cost and Efficiency Benchmark Study a new approach was developed to identify the drivers of architectural and engineering services costs ( A / E fees). A / E fees are typically identified as a percentage of total construction costs and often are separated by project complexity. For example, residence halls, classroom buildings, and research buildings are perceived to have differing complexity, resulting in differences in A / E fees.

According to this webpage, ASCE MOP 45 no longer includes "fee curves": <https://standards.globalspec.com/std/1551027/ASCE%...>. Thus, there are no "current" fee curves. Further internet sleuthing indicates a serious problem with using the curves, namely that the curves are outdated and lead to fees that are too low.
