Hematoma is a condition in which the blood accumulates beneath the skin. It may appear as a bruise. This condition is often caused by a body injury that causes blood vessels to rupture and bleed. Large hematoma can be dangerous because the pressure of blood vessels can squeeze blood vessels and block blood flow.

Hematoma is generally defined as a collection of blood outside of blood vessels. Most commonly, hematomas are caused by an injury to the wall of a blood vessel, prompting blood to seep out of the blood vessel into the surrounding tissues. A hematoma can result from an injury to any type of blood vessel (artery, vein, or small capillary).
