a silent, reflective look at the stars. For countless centuries people have felt a sense of wonder about the heavens. How did our universe come into being? Has it always been here? Is our existence due to random chance or supernatural design? Is God "out there"? If so, what is He like? Traditionally, the church has answered such questions with Scripture, while science has contributed theories and formulas of its own. Torn between a deep respect for church doctrines and an intellectual need for answers that support what their senses are telling them, many Christians have avoided such discussions altogether. Actually, the two sides are no longer that far apart. In *The Creator and the Cosmos*, astrophysicist Dr. Hugh Ross explains how recent scientific measurements of the universe have clearly pointed to the existence of God. Whether you're looking for scientific support for your faith or new reasons to believe, *The Creator and the Cosmos* will enable you to see the Creator for yourself.

'My road to atheism was paved by science . . . But, ironically, so was my later journey to God.' ---Lee Strobel During his academic years, Lee Strobel became convinced that God was outmoded, a belief that colored his ensuing career as an award-winning journalist at the Chicago Tribune. Science had made the idea of a Creator irrelevant---or so Strobel thought. But today science is pointing in a

different direction. In recent years, a diverse and impressive body of research has increasingly supported the conclusion that the universe was intelligently designed. At the same time, Darwinism has faltered in the face of concrete facts and hard reason. Has science discovered God? At the very least, it's giving faith an immense boost as new findings emerge about the incredible complexity of our universe. Join Strobel as he reexamines the theories that once led him away from God. Through his compelling and highly readable account, you'll encounter the mind-stretching discoveries from cosmology, cellular biology, DNA research, astronomy, physics, and human consciousness that present astonishing evidence in *The Case for a Creator*. Finally giving you unique satisfaction from facts you need to make important life decisions. You will be challenged and be excited after all. The problem of why the Creator created the universe still troubles thinking men and women; but if we cannot know why, we can at least know that He did not bring His worlds into being to meet some unfulfilled need in Himself, as a man might build a house to shelter against the winter cold or plant a field of rupoko to provide him with necessary food. The word necessary is wholly foreign to the Creator. Since He is the Power that is supreme over all, it follows that the Creator cannot be elevated. Nothing is above Him, nothing beyond or below Him. Any motion attributed to His direction or elevation is from us as creatures that are away from Him, in descent. He holds His position out of Himself and by leave of none. As no one can promote Him, so no one can degrade Him. It is clear that He upholds all things by the word of His power. Which is the Law. How can He be raised or supported by the things He upholds? #1 NEW YORK TIMES BESTSELLER When and how did the universe begin? Why are we here? What is the nature of reality? Is the apparent "grand design" of our universe evidence of a benevolent creator who set things in motion—or does science offer another explanation? In this startling and lavishly illustrated book, Stephen Hawking and Leonard Mlodinow present the most recent scientific thinking about these and other abiding mysteries of the universe, in nontechnical language marked by brilliance and simplicity. According to quantum theory, the cosmos does not have just a single existence or history. The authors explain that we ourselves are the product of quantum fluctuations in the early universe, and show how quantum theory predicts the "multiverse"—the idea that ours is just one of many universes that appeared spontaneously out of nothing, each with different laws of nature. They conclude with a riveting assessment of M-theory, an explanation of the laws governing our universe that is currently the
